Addition and Subtraction of Fractions

Fill in the missing numerators, then solve the problem.

$\dfrac{1}{3} + \dfrac{3}{4} = \dfrac{}{12} + \dfrac{}{12} = \dfrac{}{12}$

$\dfrac{1}{9} + \dfrac{2}{3} = \dfrac{}{9} + \dfrac{}{9} = \dfrac{}{9}$

$\dfrac{7}{9} - \dfrac{4}{6} = \dfrac{}{18} - \dfrac{}{18} = \dfrac{}{18}$

$\dfrac{2}{4} - \dfrac{1}{8} = \dfrac{}{8} - \dfrac{}{8} = \dfrac{}{8}$

$\dfrac{2}{6} + \dfrac{4}{5} = \dfrac{}{30} + \dfrac{}{30} = \dfrac{}{30}$

$\dfrac{3}{6} + \dfrac{3}{9} = \dfrac{}{18} + \dfrac{}{18} = \dfrac{}{18}$

$\dfrac{2}{3} - \dfrac{1}{4} = \dfrac{}{12} - \dfrac{}{12} = \dfrac{}{12}$

$\dfrac{2}{4} - \dfrac{1}{9} = \dfrac{}{36} - \dfrac{}{36} = \dfrac{}{36}$

$\dfrac{7}{9} + \dfrac{2}{8} = \dfrac{}{72} + \dfrac{}{72} = \dfrac{}{72}$

$\dfrac{1}{2} + \dfrac{4}{5} = \dfrac{}{10} + \dfrac{}{10} = \dfrac{}{10}$

$\dfrac{6}{8} - \dfrac{2}{6} = \dfrac{}{24} - \dfrac{}{24} = \dfrac{}{24}$

$\dfrac{2}{3} - \dfrac{4}{9} = \dfrac{}{9} - \dfrac{}{9} = \dfrac{}{9}$

$\dfrac{3}{8} + \dfrac{1}{2} = \dfrac{}{8} + \dfrac{}{8} = \dfrac{}{8}$

$\dfrac{7}{8} + \dfrac{5}{6} = \dfrac{}{24} + \dfrac{}{24} = \dfrac{}{24}$

$\dfrac{3}{4} - \dfrac{1}{2} = \dfrac{}{4} - \dfrac{}{4} = \dfrac{}{4}$

$\dfrac{3}{5} - \dfrac{2}{6} = \dfrac{}{30} - \dfrac{}{30} = \dfrac{}{30}$
